Energy Work And Simple Machines

that machines transfer mechanical energy to other objects. Simple Machines When you walk up a ramp or cut food with a knife, you are using a simple machine. Simple machines are machines that do work using one movement. A simple machine can be an inclined plane, a screw, a wedge, a lever, a pulley, or a wheel and axle.

Energy, Work, and Simple Machines

The scientific formula for work is $w = F \times d$, or, work is equal to force multiplied by distance. Simple machines cannot change the amount of work done, but they can reduce the effort force that is required to do the work! For the inclined plane and lever, less effort (effort force) is needed to do the same work because the distance is increased.
