Algebra 2**

Consider $(x+a)(x+b)$, the product of two binomials. If we were to multiply this product, we'd have $(x+a)(x+b) = x^2 + bx + ax + ab = x^2 + (a + b)x + ab$. So, when trying to factor, we want to find two numbers, an a and a b , such that when we add a and b , we get the coefficient on the x term.

Recourse in Factoring
Meaning. Recourse is a
type of Factoring which
happens when an
entity has to sell the
invoices to the client
(factor) with a
condition that the
entity will purchase
back any invoices that
remains uncollected,
this means that in
recourse, the factor
(client) is not taking
any risk of the
