Relativité Generale

General relativity (GR), also known as the general theory of relativity (GTR), is the geometric theory of gravitation published by Albert Einstein in 1915 and the current description of gravitation in modern physics.General relativity generalizes special relativity and refines Newton's law of universal gravitation, providing a unified description of gravity as a geometric property of space and ...

General relativity - Wikipedia

La relativité générale est une théorie relativiste de la gravitation, c'est-à-dire qu'elle décrit l'influence sur le mouvement des astres de la présence de matière et, plus généralement d'énergie, en tenant compte des principes de la relativité restreinte.

La théorie de la relativité (or general relativity for short) is a major building block of modern physics. It explains gravity based on the way space can 'curve', or, to put it more accurately, it associates the force of gravity with the changing geometry of space-time. History of general relativity

Tests of general relativity serve to establish observational evidence for the theory of general relativity. The first three tests, proposed by Albert Einstein in 1915, concerned the "anomalous" precession of the perihelion of Mercury, the bending of light in gravitational fields, and the gravitational redshift.
